Emu Park School Hall

Fitzgibbon Urban Development Area

New Senior Water Engineer, Nicole Graf

ROCKHAMPTON REGION BER SCHOOL PROJECTS

Bligh Tanner has been providing Civil and Structural services on numerous BER funded education projects including 10 schools in the Rockhampton region delivered through the Design and Construct process for Woollam Constructions. On these school halls Bligh Tanner 'engineered' out the standard design portal frame column that protrudes into the hall space by designing a 'braced box frame' that enabled all posts to be concealed in the walls.

FITZGIBBON: THE FUTURE FOR OUR URBAN WATER SUPPLIES?

The Fitzgibbon Chase development in Brisbane's northern suburbs is one of the first cabs off the rank for the new Urban Land Development Authority. It will also be one of the most water efficient developments in Australia with the potential to supply approximately 60% of its total water supply from local sources. The Queensland Water Commission is supporting the ULDA to develop a stormwater harvesting scheme to supply 90 ML/year for non-potable uses within the development. In addition, Japanese engineering firm JFE Engineering with the Nomura Research Institute supported by the Japanese Government proposes the development of a roofwater harvesting scheme producing 60 ML/year for potable use.

NEW SENIOR WATER ENGINEER - NICOLE GRAF

Bligh Tanner is pleased to announce that a new Senior Water Engineer, Nicole Graf, has been appointed.

Nicole joined Bligh Tanner from Aurecon in November this year, and brings with her 9 years of experience in environmental consulting, sustainability, water and stormwater management in Australia and the UK.

Nicole has special interests in urban and industrial water management, water sensitive urban design, integrated water cycle management and water treatment.
